

The Roll-Out Activities® products should be carefully tested for slippage before use. Use of these products is the responsibility of each user.

SET-UP:

- Use products only on flat, even surfaces of good condition.
- Use products on surfaces that are not slippery, wet, dirty or in high trafficked areas.
- The products are simply unrolled and stay positioned on the floor in most applications, with no adhesive or tape. If they shift underfoot or are curled at the edges (which can happen if stored for a long time), you can stretch them out and place thick tape at the edges, like duct tape or other tape that will not damage your floor.
- The Roll-Out Activities® products are mats that are placed on the floor. They should be placed in areas of low traffic, and for specific purposes, and not left out for long periods of time. The floors should be indoor, dry, and free of dirt, dust, or debris. If you plan to use tape, test tape to make sure no residue is left on the floor or the flooring comes up with the tape.

SAFETY:

- The products should be carefully tested for slip before use. The Roll-Out Activities® mats slightly move underfoot and can be minimized under normal conditions, on dry, indoor, and dust, debris, and dirt free floors.
- Products should only be laid out for use as directed. Products should not be left out for any other use.
- The products should only be used with good, supportive sneakers. The products should not be used with anyone wearing shoes, sandals, socks, high-heels or boots.
- This product requires physical activity. No one with any known or suspected health or medical issues, mental or physical, should be using these products without a doctors approval.
- Users should bring water to stay hydrated.

MAINTENANCE:

- They can be cleaned with mild soap and water or household type of cleanser using a light, gentle, circular motion. Please note that significant scuffs and stains may require scrubbing which may remove or smudge ink. Do not use abrasive cleaning tools or harsh cleaning chemicals. It is recommended that the cleaner you use be tested in a small corner area before using it on the entire material.
- Roll-Out Activities® are easy to store – just roll them up and stack or store them vertically in the protective tube it was shipped in.
